

Owanbe Planner — Fix Report

Schema, super admin, reviewer access

Document date: 30 July 2026

Owanbe Planner v6 - internal / developer documentation

Table of Contents

Summary

Fix 1 - Schema cache errors (`event`, `brand`)

Fix 2 - Super admin claim

Fix 3 - Reviewers as admins by default

Fix 4 - `oadeagbo@gmail.com` auto super-admin

Files changed

SQL to run in Supabase dashboard

Post-apply checklist

Build

Project: /Users/olufemiadeagbo/Downloads/owanbe-6

Date: 2026-07-30

Summary

Four issues were addressed: missing Supabase tables (schema cache), super-admin claim flow, reviewer-wide admin access, and auto super-admin for the founding owner.

Fix 1 - Schema cache errors (`event`, `brand`)

Root cause: Migrations were not applied to the linked Supabase project. The app correctly uses events and brands (plural); there were no singular table references in client code.

Changes:

- Added consolidated migration supabase/migrations/20260730170000_schema_access_fix.sql
- Added supabase/APPLY_ALL.sql (dashboard-ready copy of the fix)
- Added docs/SCHEMA_APPLY.md with supabase db push instructions

Action required: Run SQL in Supabase (see below).

Fix 2 - Super admin claim

Root cause: `claim_super_admin()` was restricted to `oadeagbo@gmail.com` but the UI still showed a generic “first user” bootstrap card. `refreshRoles` also passed the wrong argument type to the session sync helper.

Changes:

- `src/pages/Admin.tsx` - shows `ClaimSuperAdminCard` for founding owner when not yet super admin
 - `src/pages/Dashboard.tsx` - claim card limited to `isFoundingOwner`
 - `src/components/ClaimSuperAdminCard.tsx` - founding-owner copy and error messages
 - `src/contexts/AuthContext.tsx` - fixed `refreshRoles` to pass `Session`; fallback to `claim_super_admin`
-

Fix 3 - Reviewers as admins by default

Changes (migration):

- `grant_reviewer_admin()` - grants admin, view_financials, grant_waivers
 - `grant_owner_super_admin` trigger on `auth.users` - non-founding signups get reviewer admin
 - Backfill for existing users
-

Fix 4 - `oadeagbo@gmail.com` auto super-admin

Changes:

- `src/lib/foundingOwner.ts` - `FOUNDING_OWNER_EMAIL` constant
- `src/lib/sessionAccess.ts` - wraps `ensure_session_access()` RPC
- `src/contexts/AuthContext.tsx` - calls `ensure_session_access` on every auth state change

- Migration seeds super_admin for founding email + trigger on signup/email update

Files changed

File	Change
supabase/migrations/20260730170000_schema_access_fix.sql	Consolidated schema + access fix
supabase/APPLY_ALL.sql	Dashboard SQL (copy of fix migration)
docs/SCHEMA_APPLY.md	Apply instructions
docs/OWANBE-FIX-REPORT.md	This report
src/lib/foundingOwner.ts	Founding owner email helper
src/lib/sessionAccess.ts	Session access RPC wrapper
src/contexts/AuthContext.tsx	Auto access sync on login
src/pages/Admin.tsx	Super-admin claim in admin panel
src/pages/Dashboard.tsx	Founding-owner-only claim card
src/components/ClaimSuperAdminCard.tsx	Founding-owner messaging

SQL to run in Supabase dashboard

Option A - full migration chain (CLI):

```
cd /Users/olufemiadeagbo/Downloads/owanbe-6
npx supabase db push
```

Option B - SQL Editor only:

Paste and run the contents of supabase/APPLY_ALL.sql.

Option C - fix only (base schema already applied):

Paste and run supabase/migrations/20260730170000_schema_access_fix.sql.

Post-apply checklist

1. Confirm tables: `events`, `brands`, `user\_roles`, `admin\_permissions`
2. Sign out / sign in as `oadeagbo@gmail.com`
3. Open `/admin` - Roles, Admin perms, Payment gates tabs visible
4. Open `/dashboard` - events load without schema cache errors

Build

```
cd /Users/olufemiadeagbo/Downloads/owanbe-6  
npm run build
```
